

Project Trojan Horse

AI Prediction Report - Research Prototype

Report Information

Patient ID	TCGA-3C-AAAU
Generated	2026-07-29 03:25 UTC
Prediction source	existing_ml_ready_dataset_row

Prediction Summary

Predicted class	dead
Alive probability	49.61%
Dead probability	50.39%
Decision threshold	0.47
Threshold margin	0.033877
Prediction margin category	Borderline

The predicted probability is close to the optimized decision threshold.

Model Information

Model name	logistic_regression
Model type	LogisticRegression
Optimization version	v3
Expected feature count	45
Supplied feature count	45
Features defaulted to zero	None

SHAP Explanation

Positive SHAP values move the model toward the positive class (Dead). Negative SHAP values move it toward the negative class (Alive).

RB1_tpm__scaled	-0.930206	0.160651	toward dead
PGR_tpm__scaled	0.609594	-0.134918	toward alive

ERBB2_tpm__scaled	0.004473	0.001597	toward dead
age_at_diagnosis_years__scaled	-0.061232	0.0	neutral
total_mutation_count__scaled	-0.745752	-0.0	neutral
TP53_tpm__scaled	0.159803	0.0	neutral
BRCA1_tpm__scaled	1.360067	0.0	neutral
BRCA2_tpm__scaled	0.25346	0.0	neutral
PIK3CA_tpm__scaled	0.045035	0.0	neutral
PTEN_tpm__scaled	0.172127	0.0	neutral

Development-Cohort Context

Observed label in dataset	Alive
---------------------------	-------

This patient may have been used during model development. The result is a technical pipeline test, not an independent validation.

Limitations

- The model predicts a binary vital-status label and does not model time-to-event or censoring.
- The current cohort is TCGA-BRCA and is not yet restricted to confirmed TNBC cases.
- This report does not represent independent external validation.
- The probability reflects the fitted model and should not be interpreted as an individual clinical prognosis.

RESEARCH USE ONLY. This report is generated by an experimental software prototype. It must not be used for diagnosis, prognosis, treatment selection, or other patient-care decisions.
